

BBR SUPERCAMP

BILLET ADJUSTABLE SWINGARM

Unique BBR engineering with three (3) interchangeable "leverage-blocks" (soft, medium, stiff). Each leverage-block allows for a full range of rear suspension capabilities by controlling shock leverage ratios, giving the rider total control of rear suspension set-up for weight, ability, preference and track conditions. Once the chosen leverage-block is installed, the rider can adjust the shock for ultra-fine tuning.

BBR SuperComp Swingarm features:

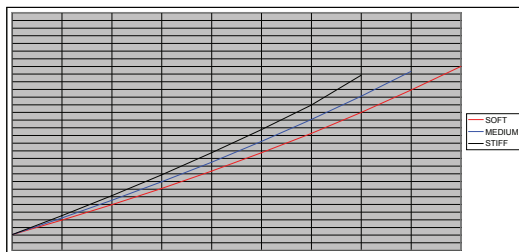

- Billet machined 6061 aluminum spars and shock pivot, welded and heat-treated for ultimate strength
- Billet machined 6061 interchangeable leverage-blocks (3) (soft, medium, stiff)
- Billet adjustable axle blocks with stainless adjuster bolts
- BBR exclusive chain slider-material reduces chain noise
- Quality roller needle bearings and stainless sleeves
- Handmade in-house at BBR

Available for:

- BBR Perimeter 50 & 110 frames
- BBR SuperPro 50 frame
- BBR SuperPro 110 Swingarm Kit (for stock 110 frames)

Complete package: \$699

Perfectly Balanced
Leverage Curve

Soft

Ideal set-up for high speed outdoor tracks, or applications where softer suspension is desired.
Standard setting with 1100lb spring.

Medium

Standard set-up for indoor SX and Arenacross tracks with deep whoops, steep jumps and seat bouncing.

Stiff

The perfect set-up for pro-level racers, big air and freestyle riders.

Optional Spring Rates:

975lb: 660-HXR-1005

1100lb (provided as standard)

1200lb: 660-HXR-1007

When changing adjuster blocks, first install on shock before attaching to swingarm. It may be necessary to slightly loosen rubber chain slider to help with installation.
